PROGRAMMING

FAST, EASY PROGRAMMING OF AV AND MIXED MEDIA SHOWS

EASY+ is a graphics based software package, designed for fast, easy and flexible programming of audio-visual and mixed media shows.

EASY+ runs on IBM compatible personal computers under DOS 6.2 which ensures fast real time operation. Its graphic user interface permits mouse-based programming, and full advantage is taken of the VGA colour display to show controlled device and program status.

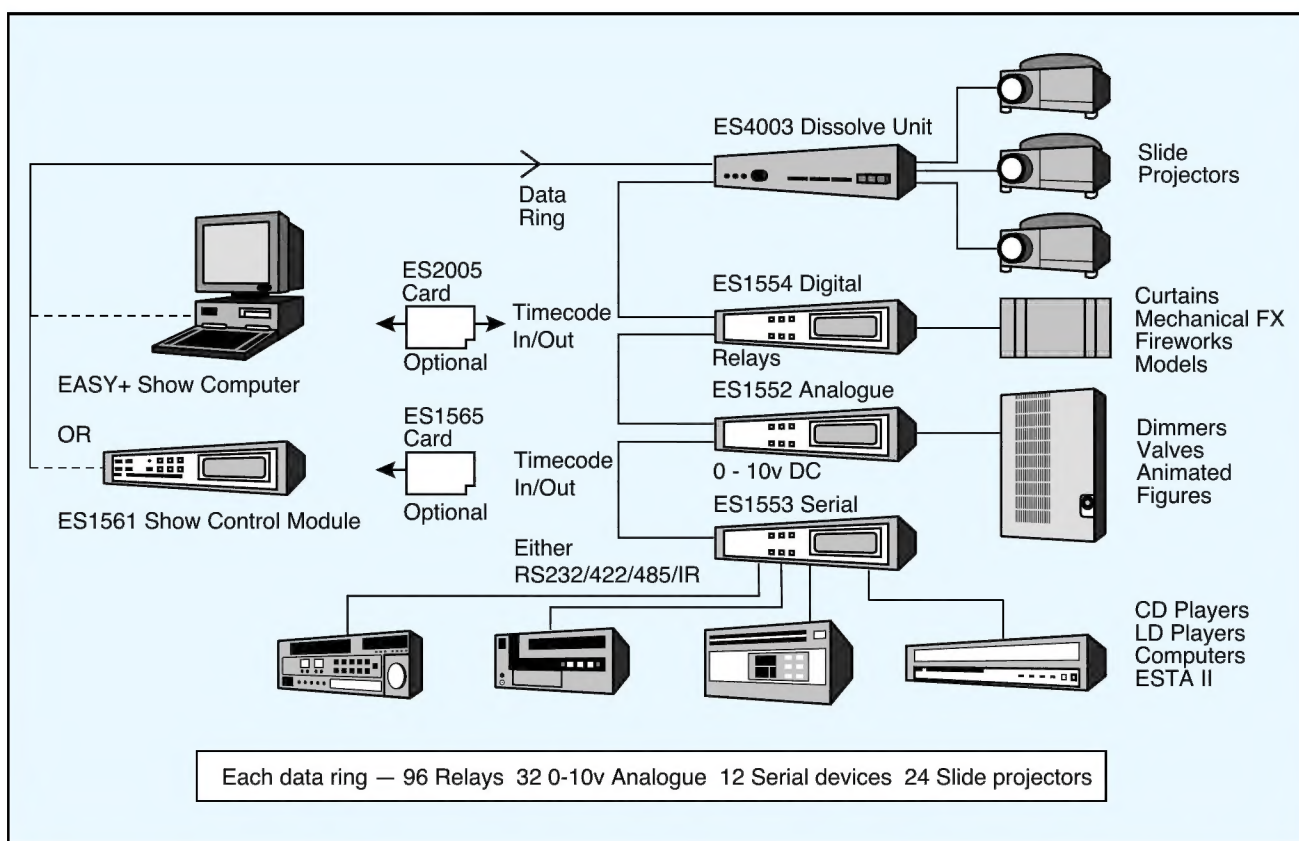

If they prefer to do so, professional programmers can use keyboard data entry or editing.

EASY+ is the latest version of this popular program, used in many installations around the world, but now enhanced with new features and fully compatible with the ESLINX™ show control range of products.

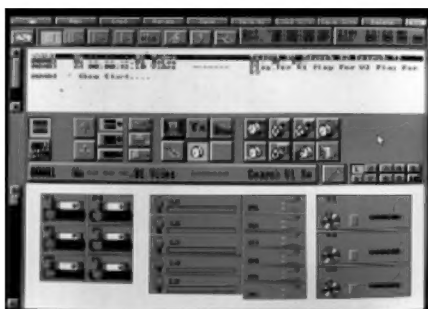

ELECTROSONIC

EASY+ is used with standard ELECTROSONIC interfaces (e.g. the ES1552 analogue module, or the ES1553 serial module) to control a wide range of equipment and protocols.

Run on a PC computer, it can be used to program and rehearse shows, with precise synchronisation to SMPTE or EBU timecode when used with the optional ES2005 communications card.

EASY+ can also be run on an ESLINX show control module, for reliable operation of shows in a permanent installation.

Control of equipment is usually via one or more RS232 data rings, connecting the various control interfaces. Each data ring has a capacity for controlling a number of devices. However, EASY+ is capable of controlling more devices, up to the maximum shown, by using more data rings –

- 24 slide projectors. (Max 96)
- 12 video or audio sources e.g. CD, LDP, Tape Players, ESTA II™. (Max 48)
- 96 relays. (Max 192)
- 32 Analogue 0–10v DC channels. (Max 64)

In addition DMX Lighting or MIDI Show Control serial outputs can be derived using the ES1460 interface card. This can be fitted either in a computer or in an ES1561 Show Control Module with ES1567 ISA bus extension.

ESLINX™, and ESTA™ are Trademarks of Electrosonic Ltd.
